

To The Commission:

Part 97.101 (a) "In all respects not specifically covered by FCC Rules each amateur station must be operated in accordance with good engineering and good amateur practice" is sufficient. There is no need for an additional rule(s) concerning bandwidth on different modes of operation. To create an additional bandwidth rule(s) would discourage experimentation and penalize the majority of amateur radio operators who are able to apply common sense to limit their bandwidth when the band conditions require it. The few amateurs who cannot, through ignorance or indifference, apply "good engineering and good amateur practice" by limiting their bandwidth based on the band conditions at the time will not be discouraged by another Part 97 rule(s) limiting bandwidth. I do not support an additional rule(s) requiring bandwidth limitation in any form.

Sincerely,

Philip A Covington, N8VB
